PROFESSIONAL SUMMARY

Data Engineer with hands-on experience in Azure Databricks, Azure Data Factory, PySpark, SQL, Delta Lake, ETL pipelines, and Data Vault 2.0. Experienced in developing data pipelines, implementing schema validation and data quality checks, and building curated data layers using RDV and BDV concepts. Skilled in data ingestion, validation, testing, pipeline development, and Azure data engineering workflows.

EDUCATION

- Prasad V. Potluri Siddhartha Institute of Technology, Vijayawada**
B.Tech | Computer Science and Engineering | 2021-2025 | CGPA: 8.91/10

EXPERIENCE

- Accenture | Packaged App Development Associate | 2025–Present**
 - Generali One Finance – Data Engineering**
 - Developed Curated Layer data pipelines using Azure Databricks and Delta Lake with schema validation and technical data quality checks.
 - Developed Azure Data Factory (ADF) pipelines for automated data ingestion and transformation from the Landing Layer.
 - Worked on Raw Data Vault (RDV) and Business Data Vault (BDV) using Data Vault 2.0 concepts including Hubs, Links, and Satellites.
 - Implemented data ingestion from the Landing Layer while maintaining data consistency, integrity, and quality.
 - Worked on pipeline logging and audit tracking to support data monitoring and traceability.
 - Performed unit testing, data validation, environment validation, and pipeline execution to ensure reliable data processing.
 - Used Azure Portal, Databricks, DevOps, and PR workflows during development and testing activities.
- Accenture**
 - Packaged App Development Associate Intern | 2025**
 - Supported application development, testing, debugging, and deployment activities.
 - Developed a Python-based Data Masking Tool to protect sensitive information for testing and secure data sharing.
 - Worked with configurable masking rules and data transformation techniques to generate protected output data.

PROJECTS

- Data Masking Tool | Python, Faker, YAML**
 - Developed a Python-based Data Masking Tool to protect sensitive data by masking and transforming confidential information.
 - Implemented configurable masking rules using YAML to identify columns requiring data masking.
 - Used Faker to generate realistic substitute values while maintaining the required data format.
 - Applied hashing and data transformation techniques to protect sensitive information and generated masked output files for secure testing and data sharing.
- Chronic Kidney Disease Prediction | Python**
 - Developed a machine learning model to predict Chronic Kidney Disease using patient-related data.
 - Performed data preprocessing, missing-value handling, model training, and testing.
 - Evaluated model performance using appropriate classification evaluation techniques.

TECHNICAL SKILLS

- Programming:** Python, SQL, C++, PySpark
- Data Engineering:** ETL, Data Pipelines, Data Validation, Data Quality, Data Transformation, Medallion Architecture, Data Vault 2.0
- Azure & Databricks:** Azure Databricks, Delta Lake, Azure Data Factory, Azure Portal
- Databases:** MySQL
- Machine Learning:** Pandas, NumPy, Scikit-learn, Data Preprocessing, Model Evaluation
- Development & Tools:** Git, Azure DevOps, PR/Code Review, Unit Testing

CERTIFICATIONS

- Databricks – Data Engineer Associate Certification
- NPTEL – Elite + Silver Certification in C Programming
- Infosys Springboard – Python
- Spoken Tutorial – SQL
- HackerRank – C++ Certification

ACHIEVEMENTS

- Participated in Flipkart GRiD, demonstrating problem-solving and technical skills at a national-level competition.
- Organized and coordinated cultural events as a Cultural Club Organizer.
